

#1 It will be assigned because published would need for it to be installed and would not show in the start menu

#2 I would start by creating it in ITS OU and make the GPO there so it can work out with the scenario

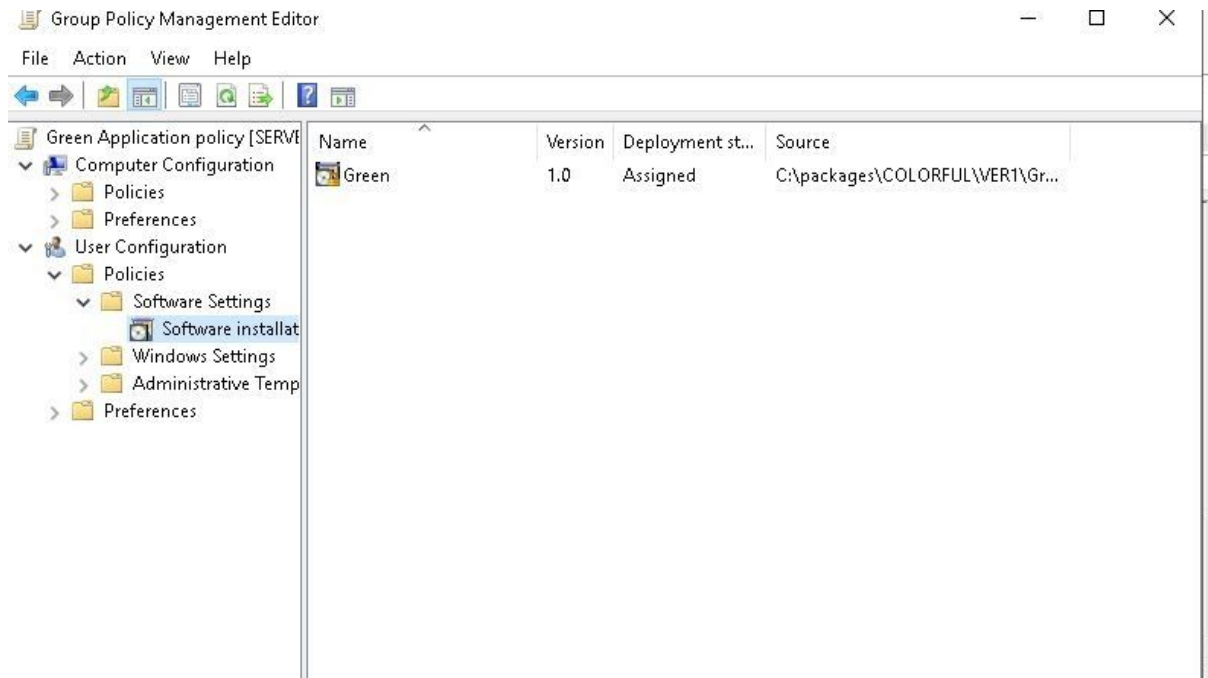

#3

#4

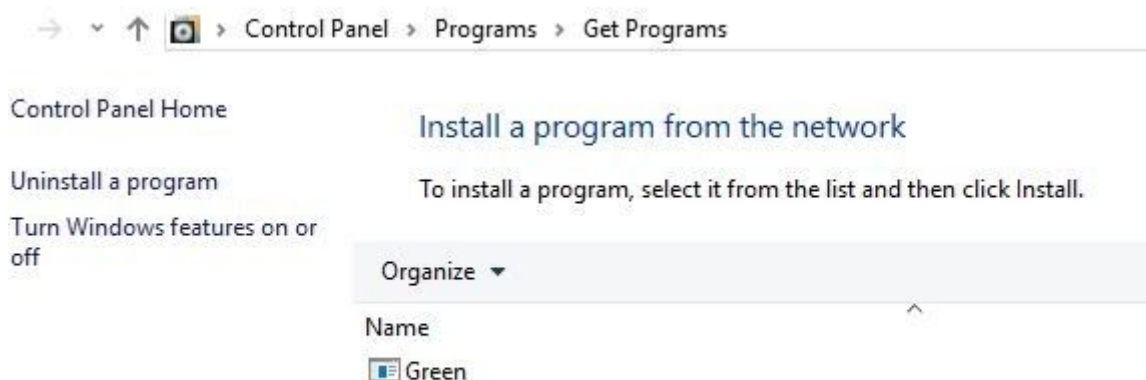

#5

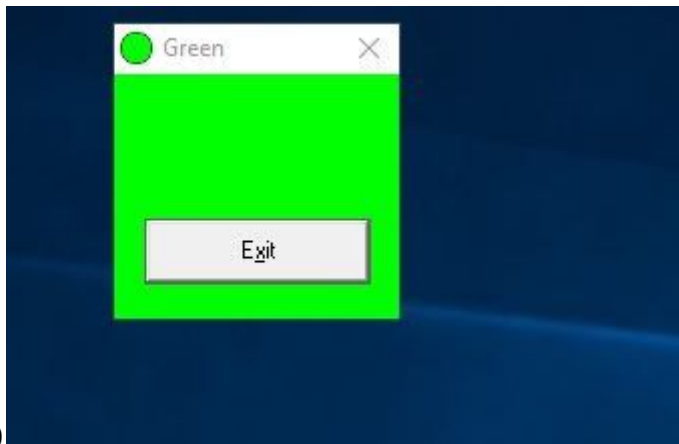

#6 the green application is put on csuser because we added in the policy software

#7 green is in the installation menu

#8

#9 As i click to execute the program, it loads for a little then proceed to open a green application with the button exit on it.

#10

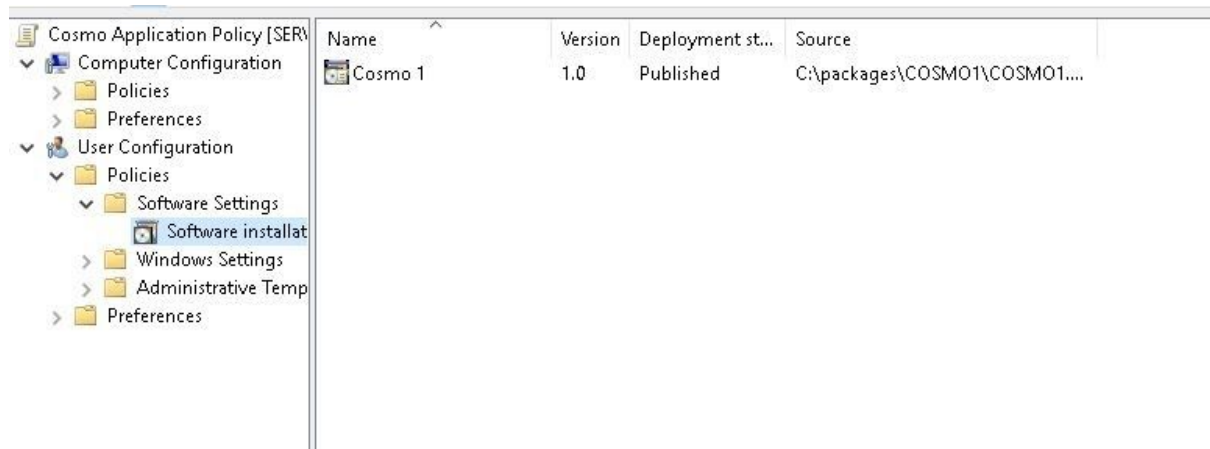

11# i realize some new application that where not there before.

12# gren blue and red

13# yes red is already installed so as blue

14#

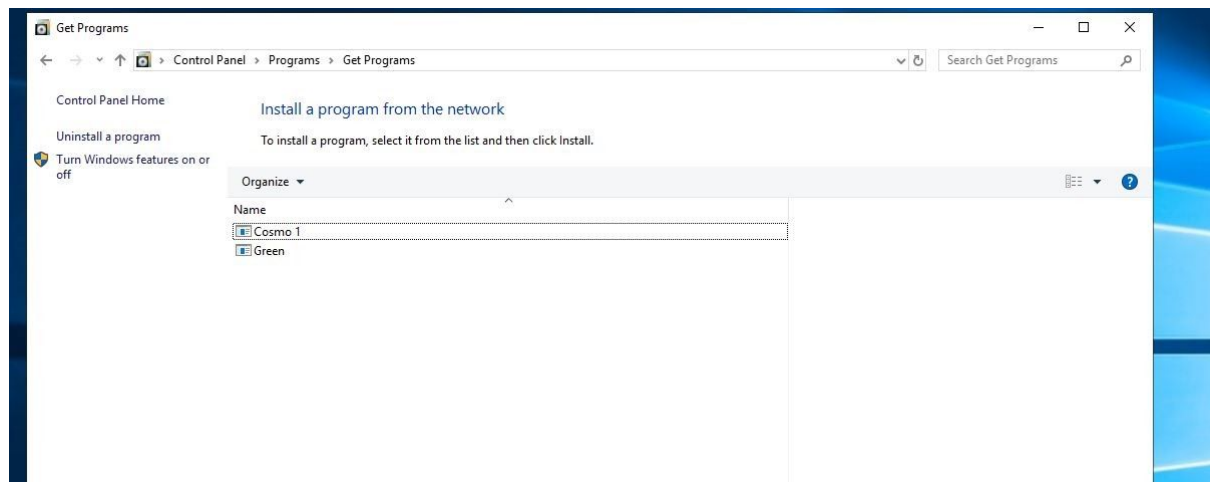

15 #

16# yes it does because we added it to the entire ITS OU

17#green is the only one added

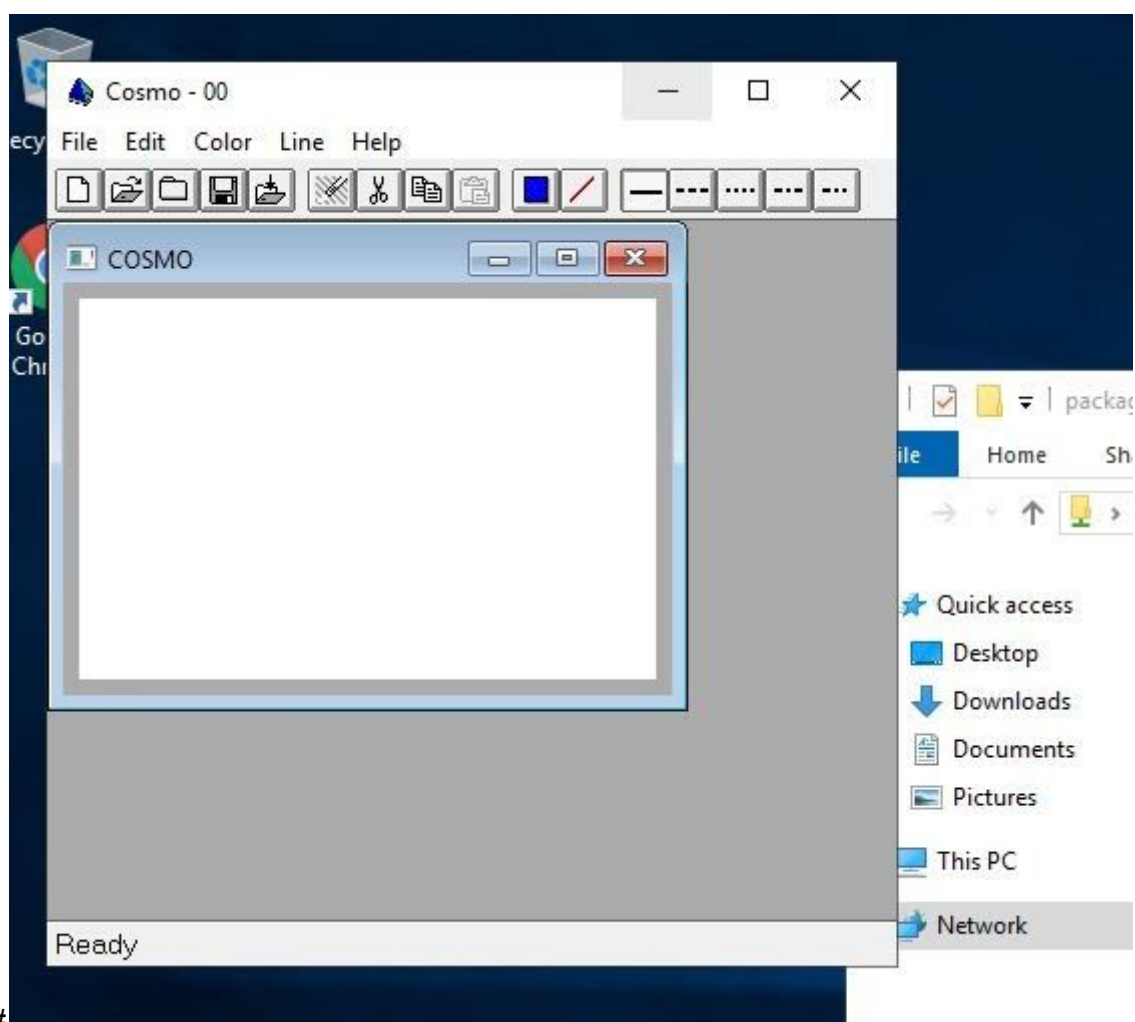

18#

19# no it's not seem like it is associated with anything as the CSOMO.CS00

20# opened a paint like application

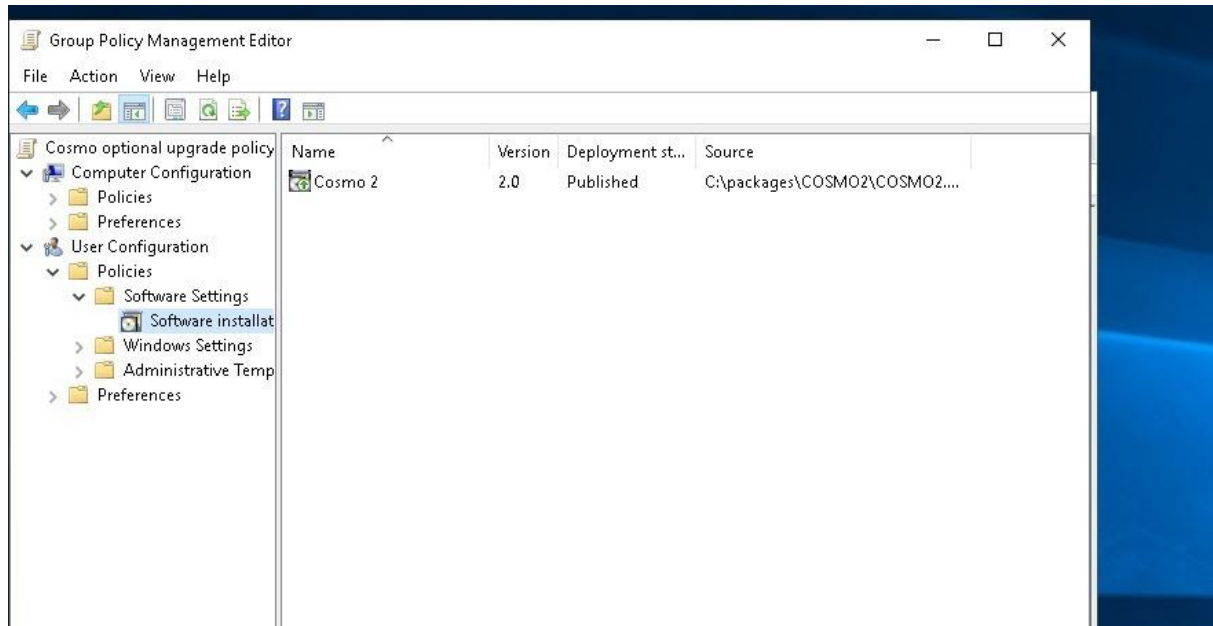

21# yes is available

22#

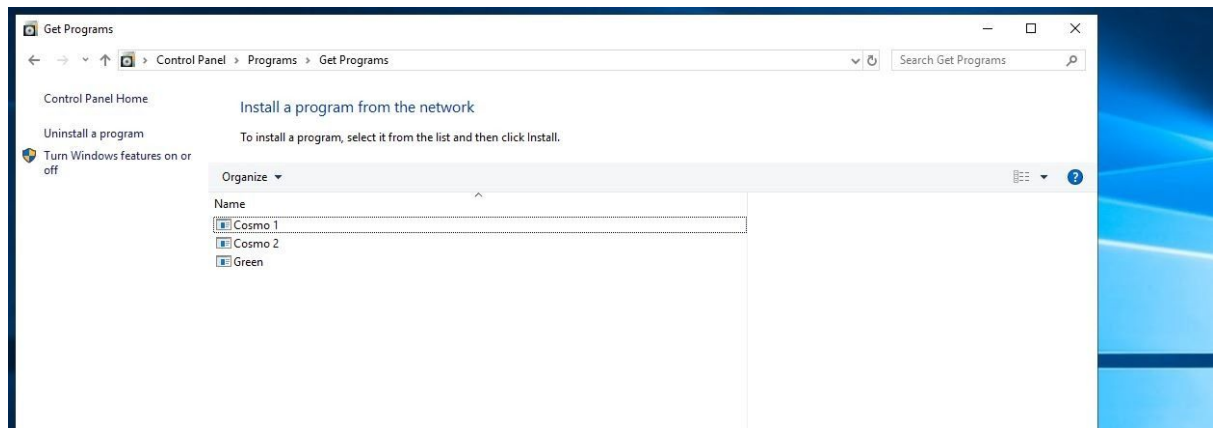

23# i do not see Cosmo1 on the menu

24#

25# yes i was able to run cosmo 1

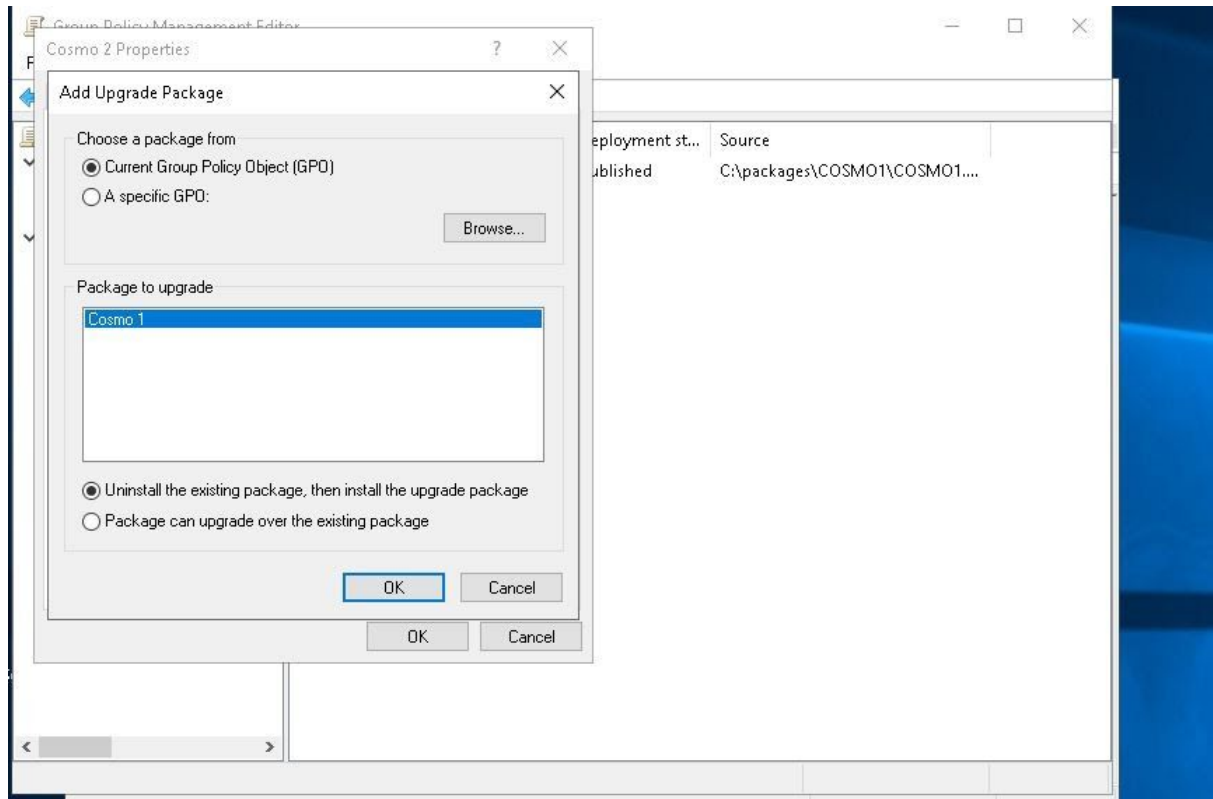

#26

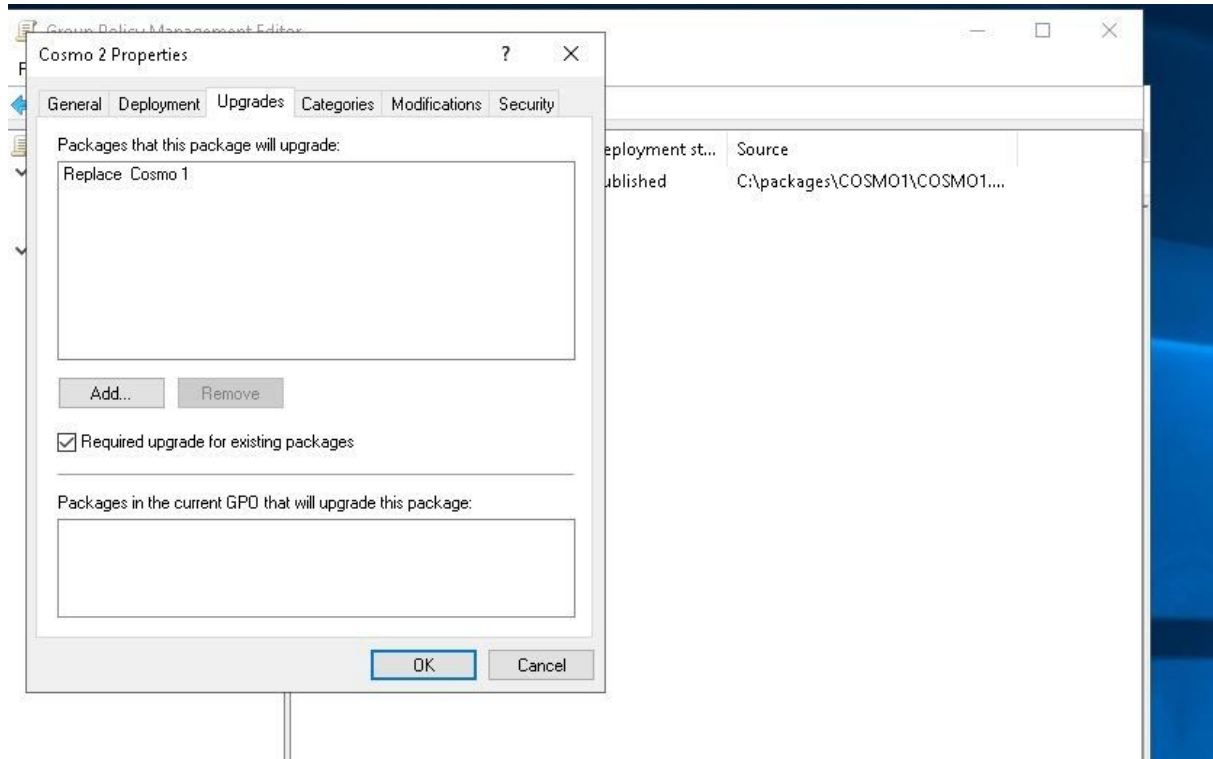

#27 no longer available

#28 yes i am able to run comso2

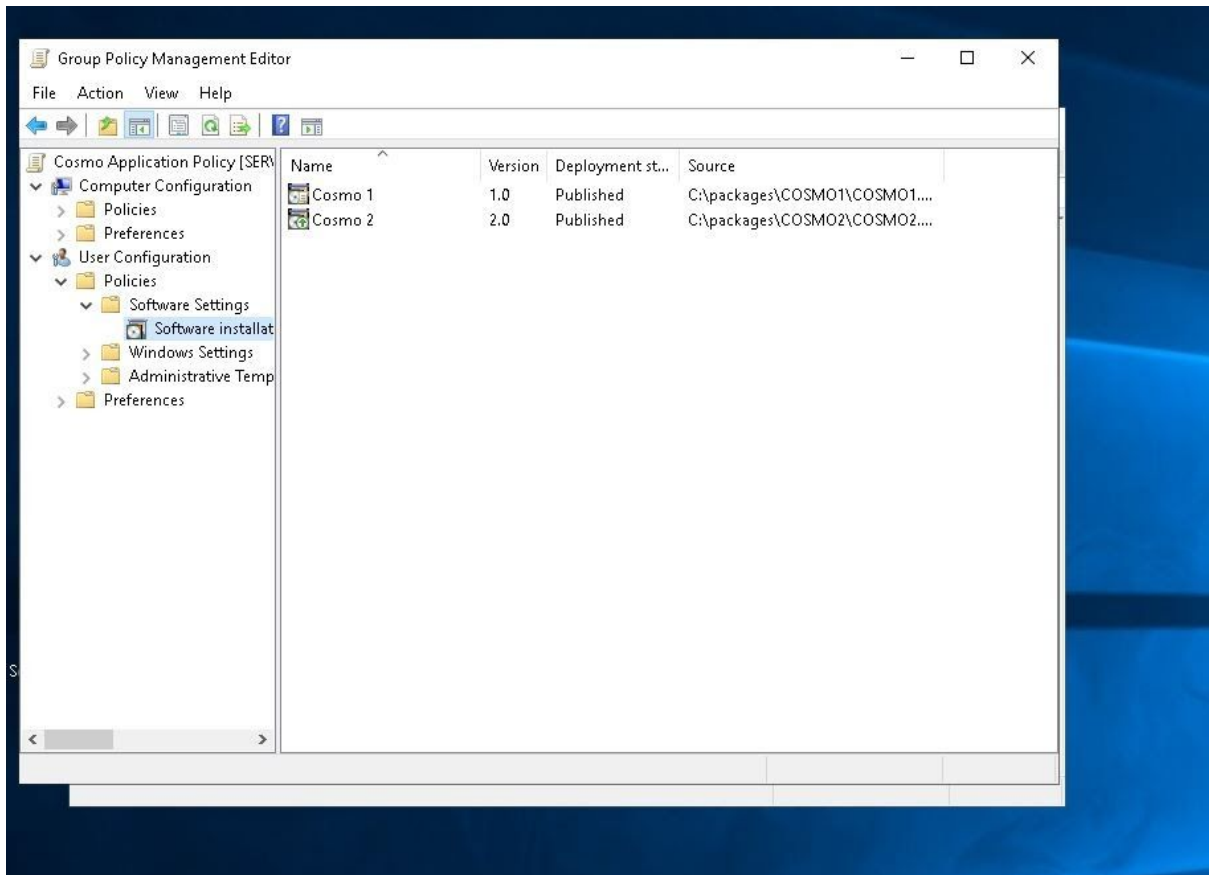

#29

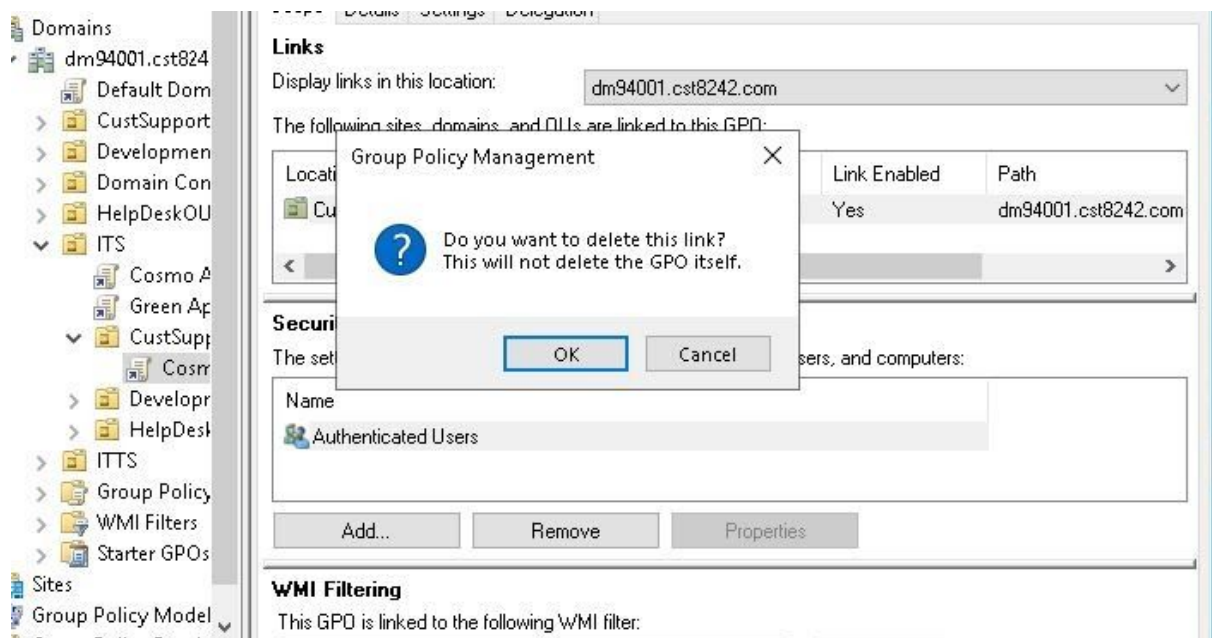

#30

#31

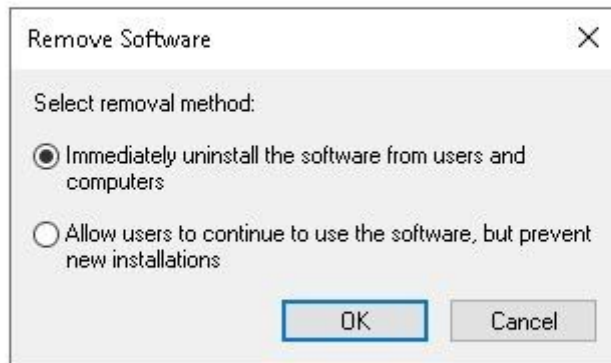

#32

#33 no it's not

#34 it shows a quick loading then disappears and nothing comes up

#35

#36 cosmo 2 was deleted as the option menu was stated

#37 green application was deleted but still available .

#38 because of the link GPO that was deleted

#39 we didn't uninstall the green application just deleted the install link

#40 it was deleted so no longer visible

#41 green is still visible because we just prevented anyone else from getting to it.
